Criteria Document Update Program (CDUP)

The Criteria Document Update Program (CDUP) was created by HQUSACE to maintain and develop criteria for the U.S. Army Corps of Engineers. The program develops and maintains documents, designs and standards that support not only the Corps, but outside customer needs as well.

The work accomplished under the CDUP results in improved construction, rehabilitation, and maintenance/repair projects, which are more cost effective.

Over the past years, the CDUP umbrella has been expanded and now includes program areas: criteria documents and notice program, green building criteria, and seismic support.

The [criteria document update program](#) maintains the existing inventory of Corps criteria documents (guide specifications, technical manuals, standard designs, others) and develops new criteria documents in technical areas where the need is identified.

The [notice program](#) maintains CEGS guide specifications through publication of Notices (changes) to those documents. The program includes operation of the TECHINFO web system for publication of CEGS and other criteria documents, web-based feedback system, maintenance of a master reference publication list, and other functions associated with the CEGS specifications.

[Green building criteria](#) includes development of criteria to incorporate environmentally friendly building techniques and products.

[Seismic support](#) provides support in the investigation of seismic vulnerability of federally owned or leased buildings.
